

AuditWatch®

Regular audits are essential to ensure the safety, quality, and regulatory compliance of water and food supplies, as well as to identify opportunities for operational improvements. Whether for the purposes of ensuring safety and quality, reporting regulatory compliance, demonstrating risk management, identifying areas requiring and then tracking operational improvements or as part of implementing a Hazard Analysis and Critical Control Point (HACCP) programme, detailed and rigorous audits are essential.

What is Audit Watch?

AuditWatch® is a specialist management module of Information Engine™ that facilitates, automates and systematises the auditing and inspection of systems and physical infrastructure. It contains a library of dynamic, electronic forms designed to automate the capture of information required to conduct and document an audit. It also includes a simple workflow for an audit process, a repository for audit documentation and several reports and dashboards which are available to the users. As well as a specialist auditing managing module, AuditWatch® can also function as a simple inspection tool. Programme, detailed and rigorous audits are essential.

AuditWatch® will help Audit Managers, Water Quality Compliance Managers, Water Quality Regulators and Water Quality Auditors to save time by streamlining the planning, tracking and documenting stages of any water quality audits.

Why Audit Watch?

Tailored for Audit Mangers, Water Compliance Managers, Regulators and Auditors.

BENEFITS FOR AUDIT MANAGERS:

- Empowers more efficient planning and assigning of audits.
- Facilitates streamlined data entry.
- Allows real-time tracking of assigned audits.
- Generates standalone lists of improvements to assign once the audit is closed out.

BENEFITS FOR WATER QUALITY REGULATORS:

- Allows result comparison across all auditees.
- Streamlines reporting.
- Provides greater consistency in water quality management system auditing.
- Guarantees governance of the audit process.

BENEFITS FOR WATER QUALITY AUDITORS

- Simplifies information and data capture using pre-made, jurisdiction- ready forms and choice of compliance grades.
- Improves transparency surrounding your sampling methodology.
- Provides ability to upload images and other evidence.
- Generates reports or specific parts of reports into Word format.

BENEFITS FOR WATER COMPLIANCE MANAGERS

- Access to a selection of water cycle management system audit checklists based on industry-standard frameworks.
- Tailored checklists with a choice of grading systems depending on jurisdictional requirements.
- Helps the auditor, auditee, and regulator reach a common understanding of each criterion in terms of a practical outcome.
- Stores all past and present audits in one place and makes them accessible with a click of a button.
- Pinpoints shortcomings or potential improvements without lengthy audit reports thus, reducing timeframes to fix up and improve systems.

Information Engine™ (IE) is a customisable advanced water management analytics and visualisation software platform. IE converts data derived from field sensors into user-relevant information enabling users to make informed water quality management decisions.
